1.0 SCOPE

The Company's quality program is implemented and maintained as needed to meet the requirements of our Company vision and governing policies.

The Company has adopted a process-oriented method of management. This approach emphasizes the importance of:

- a) continuous improvement of processes based on objective measurement and analysis.
- b) need to consider processes in terms of added value,
- c) obtaining results of process performance and effectiveness and
- d) understanding, meeting and integrating Customer, statutory and regulatory requirements,

The sequence and interaction of processes has been determined and are controlled by specific work details. Workmanship standards are set for each process with appropriate data gathered and reviewed to ensure process effectiveness. During Management Review, process resources are discussed and allocated. Corrective and preventive action is taken to ensure the processes achieve the desired results and continuously improve.

2.0 RESPONSIBILITY AND AUTHORITY

All employees are empowered to report nonconformances and request corrective or preventive action to prevent the occurrence of nonconformities relating to work. The Responsible Authority oversees this effort and makes sure that issues are identified and recorded and solutions are transmitted to and resolved by the proper functions and verified for effectiveness.

3.0 INSPECTION SYSTEM

The engineering drawings and technical documentation provide the requirements for all deliverables and services. In all cases, this includes criteria for acceptance/rejection; where this is not clear, the Responsible Authority oversees clarification of these criteria with the Customer.

Incoming materials are inspected to ensure they meet requirements before use and as a means of monitoring ongoing Supplier quality.

In-process inspections are conducted to ensure ongoing quality of work. These may be done randomly at the discretion of management or via planned QC inspections according to work details.

Once all operations are complete, work undergoes final inspection to determine that all planned arrangements have been completed.

4.0 DOCUMENTS AND RECORDS

Records are controlled to provide evidence of conformity to requirements. Documents are controlled so that the information on them is accessible, legible and suitably maintained. Documents are reviewed and approved prior to release and only the latest versions are
