#### 1.0 Control of Documents

The Document Control Center (DCC) is the custodian and source for controlled copies of released documentation masters and external documents that affect the form, fit or function of a product or service. Some documents are received, retained without change and distributed under control by DCC. Documents are approved by designated authorities prior to release and distribution by DCC. Document changes are coordinated with Customers and regulatory authorities when required by contract or regulatory requirements. Approvals may be accomplished by actual signatures or initials on hard copy documents or electronic signatures with authorization information provided by and maintained in electronic files. All QMS documents are identified by number and exhibit the latest change and current revision level. QMS documents are available at all points of use in hardcopy or electronic format. Masters and area specific documents, department procedures and standards that do not affect form fit or function of a product or service may be controlled and authorized by designated authorities and may be retained in the originating department or area. Some types of data are maintained within system databases that limit write access where appropriate. Other types of data are held within local areas and controlled by local teams.

(Your Co) has controlled documents that are required by the quality management system. A documented procedure has been established to define controls needed to:

### 2.0 Control of Records

Information created during the operation of the QMS is retained in hardcopy format, microfiche or computer files. Records and reports are controlled to

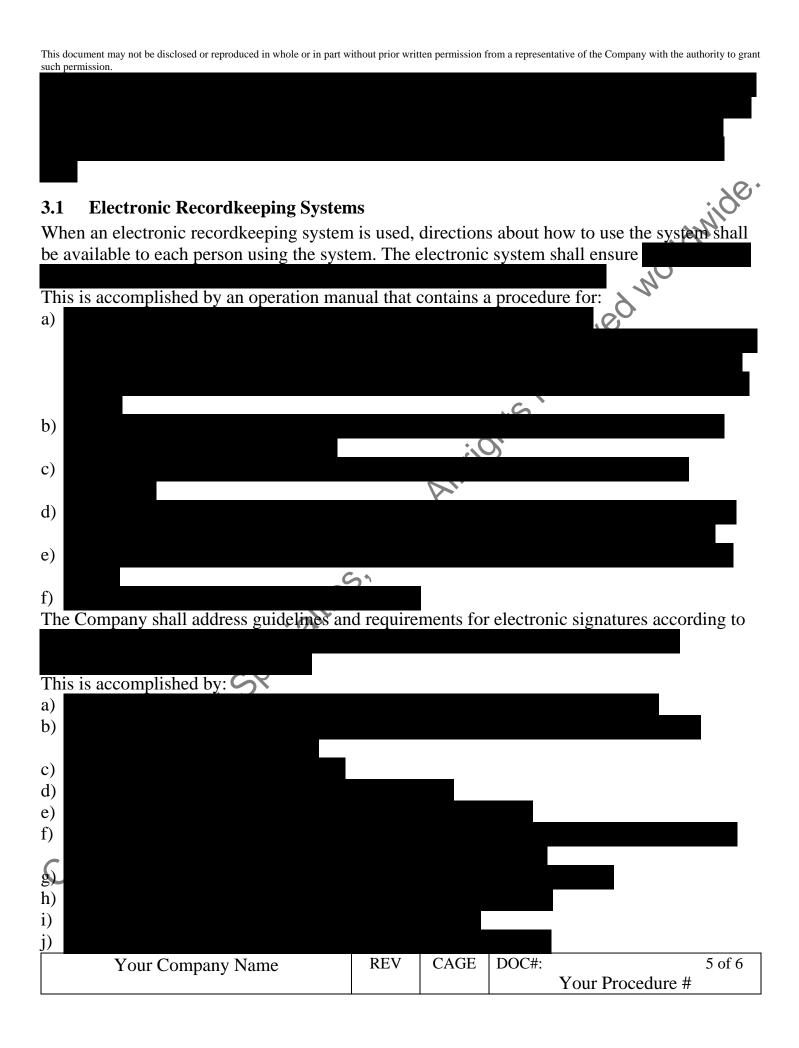

Records are available for review by Customers and regulatory authorities according to
